For people like me who spend a lot of time thinking about medical software, it's tough to imagine a world without Cerner's suite of popular products. However, we realize it's not everyone's job to research, evaluate, and compare health IT solutions. So here, we'll provide the skinny on the Cerner vendor. What is Cerner? Cerner is a U.S.-based, multinational company that offers software, services, devices, and hardware for medical practices, long-term care facilities, retail pharmacies, and laboratories. Founded: 1979CEO: Brent SchaferHeadquarters: Kansas City, MissouriCustomer base: Licensed to 27,000+ facilities around the worldRevenue: $5.5 billion in 2020 In this comprehensive guide, we break down everything you need to know about Cerner, including descriptions and screenshots of some of its most popular software solutions. Check out the video below for a general Cerner overview: Cerner products and services Cerner is considered a big vendor in the health IT industry. It has frequently been recognized as a "Leader" in Gartner's Magic Quadrant reports over the years, and Gartner has called it a "Megasuite Leader" currently dominating the population health management (PHM) vendor landscape (content available to Gartner clients). That said, the company's products aren't exclusively geared toward hospitals and multispecialty health centers; Cerner serves small, single-doctor offices as well. In 2018, Cerner Corp. partnered with Lumeris and invested $266 million in a population health and value-based care tools. Thanks to national legislation and changing care delivery models, the medical market is undeniably shifting toward value-based care, and Cerner's early effort to embrace this transition is what likely caught Gartner's attention. As part of the investment deal, Cerner and Lumeris will partner until 2028 to pursue developments in their Maestro Advantage software, a system that will focus on provider-sponsored health plans and Medicare Advantage plans. High-profile clients Cerner's clientele includes the following high-profile healthcare providers: The Department of Defense (DoD). In 2015, Cerner's EHR won a contract with the DoD to replace its legacy health IT system in its 55 hospitals, 350+ clinics and multiple military locations (e.g., ships and submarines). The transition is on track for full deployment in the next few years. Ascension Health. Ascension, the largest nonprofit Catholic health system in the U.S., partnered with Cerner in 2004 to transfer all of its care facilities to a single EHR solution. Since then, the health system has seen tremendous growth and improvements in patient outcomes. Cerner EMRs Electronic medical records (EMR) software also known as electronic health record (EHR) software, makes it possible to automate a medical practice's clinical operations, such as documenting diagnoses and medications. Cerner has an EMR system to fit the needs of every type of healthcare provider. To help you differentiate between them, here's a look at some of the most popular Cerner solutions: Cerner PowerChart Ambulatory EHR Ideal for: Physician practices of all sizes; it supports more than 50 medical specialties. Noteworthy functions: E-prescribing, lab integration, data analysis, narrative reports, custom templates, chart search, Medicare eligibility verification, direct messaging, and patient portal. Deployment options: Cloud-based or on-premise. See what people are saying about Cerner PowerChart Ambulatory EHR. CareTracker by Cerner Ideal for: Assisted living facilities, long-term care centers, retirement communities, and special care units of all sizes. Noteworthy functions: Point-of-care documentation, data analysis, clinical intelligence capabilities, and assessment alerts. Deployment options: Cloud-based. See what people are saying about CareTracker by Cerner. Cerner Millennium Ideal for: Enterprise healthcare providers serving multiple specialties, such as large hospitals or behavioral health services providers. Noteworthy functions: Medication administration documentation, data analysis, audit reporting, and lab/drug alerts. Deployment options: Cloud-based or on-premise. See what people are saying about Cerner Millennium. Cerner practice management systems Practice management software helps care providers handle administrative and operational processes, such as appointment scheduling, billing, and financial reporting. Here are details of Cerner's solution for managing physician practices: Cerner Specialty Practice Management Ideal for: Small to midsize clinician practices with 10 or fewer providers. Noteworthy functions: Real-time insurance claims checking, data analysis, payment posting, patient scheduling, and support for ambulance billing. Deployment options: Cloud-based or on-premise. See what people are saying about Cerner Specialty Practice Management. Cerner mobile apps One of the most prominent Cerner products is PowerChart Touch, a mobile app that allows physicians and healthcare professionals to use tablets and smartphones while treating patients. This capability is important, as mobile device integration is among medical software buyers' top-requested functionalities, both for EMR and practice management solutions. Cerner PowerChart Touch interface (Source) PowerChart Touch is a cloud-based app for iPads and iPhones that allows a healthcare organization to: Review patient chartsUse voice dictation to make notesDocument allergies, symptoms, and health historiesDraft and sign progress notes Other Cerner services Many medical practices are researching Cerner for services other than software. Some practices are looking to outsource collections so they can focus more on patient care and less on business operations. That's where Cerner's billing and coding services come in. Cerner's revenue cycle management (RCM) systems can take over medical billing, reimbursement, and accounting processes such as: Denials managementCash postingInsurance verificationCharge processingClaims scrubbing/processing Submit your practice's charges through your EMR, and Cerner's dedicated staff will ensure you're maximizing collections and minimizing errors. The purpose of this article is not to create an all-encompassing list of Cerner software products and services. Rather, it is to highlight some of the vendor's most popular solutions to better guide potential software buyers. The vendor featured in this research was selected based on high search volume for keywords related to its product offerings. User ratings and reviews mentioned in the product snapshots are as of July 7, 2021. Cerner Becomes First Major Health Care Information Technology Company to Fully Integrate SNOMED CT into Its Electronic Medical Record KANSAS CITY, Mo., Aug 28, 2002 /PRNewswire-FirstCall via COMTEX/ --Today's health care is inundated with variance and a lack of standardization. For example, clinicians within the same hospital might use the term 'heart attack' in one wing, while in another wing they might use 'myocardial infarction.' As more and more health care organizations adopt electronic medical records (EMR), this lack of standardization in reporting diminishes the quality and usefulness of data in the EMR. Cerner Corporation (Nasdaq: CERN) recently signed agreements with two companies that will help its clients structure their clinical knowledge and standardize the care they provide. The agreements also will offer clients greater ease of use in evidence-based medicine. Cerner signed a licensing agreement with Health Language, Inc. (HLI), to use Cyber+LE as a tool and platform for the development and management of the controlled medical terminology core of Cerner's Health Knowledge Architecture(TM). Cyber+LE is designed to allow Cerner Millennium(TM) solutions to better manage and relate medical information to standard knowledge models. HLI allows clinicians to make technology adapt to their workflow, rather than forcing clinicians to adapt to technology. Clinicians can maintain their personal and organizational preferences for terminology and not be forced to adhere to a limited list of clinical terms. With the HLI tool, Cerner Millennium solutions will provide flexibility for clinicians to use the clinical terms they prefer. For instance, a lab technician might call an Electrolyte Panel (CPT 80051) a Chem 4, while a nurse might call it a Chemistry Profile and a physician might simply call it Electrolytes. Regardless of the name, HLI will allow Cerner Millennium solutions to define and relate these terms to mean the same thing, an Electrolyte Panel. Cerner Millennium solutions will understand that a clinician who has documented myocardial infarction as a diagnosis in one encounter is really expressing the same concept as another clinician who prefers to call the condition MI. Whether running reports or searches across an electronic medical record, implementing complex decision-support functionality, mapping clinical activities into billing or referencing the clinical reference terminology, SNOMED CT, the HLI language engine, will enable Cerner Millennium solutions to relate terms and information between users and across care venues for the most accurate results and robust performance. "If there's one thing that will cripple the health care industry, it will be a lack of standardization," said Paul Gorup, Cerner co-founder and vice president of Cerner's Knowledge and Discovery organization. "Any IT company can offer tools to combat this problem, but Cerner is unmatched in its ability to integrate a solution such as HLI to aid health care organizations in standardizing their medical terminology. Thanks to our architecture and common database model, we can implement these solutions quickly and more comprehensively, offering our clients access to the latest in evidence-based medicine." "We are delighted to participate with Cerner Corporation while they help lead the way to improving the efficacy of clinical and management information systems," said George T. Schwend, president and chief executive officer of HLI. "The industry has called out for common language solutions and Cerner is answering the call." Additionally, Cerner is the first major health care information technology provider to fully integrate SNOMED Clinical Terms(R) (SNOMED CT(R)) into its electronic medical record. Cerner signed a licensing agreement with the College of American Pathologists (CAP) for SNOMED CT, which is maintained by SNOMED(R) International, a division of CAP. SNOMED CT is a comprehensive, multi-lingual health care terminology. By marrying the terminology of SNOMED with Cerner Millennium solutions, clinicians can retrieve, share and aggregate patient information more easily and completely. SNOMED's standard vocabulary bridges the gap between multiple names used in different departments by different clinicians for the same medical concept. SNOMED CT is being integrated into Cerner Millennium solutions, allowing health information within the electronic medical record to be coded using SNOMED terms. This will make sophisticated searches easier and more complete, with more consistent results. "Cerner and SNOMED International believe that the use of controlled medical vocabulary is a necessary step toward improving the quality and standardization of health care," said Diane J. Aschman, chief operating officer of SNOMED International. "Cerner's choice to integrate SNOMED CT into its product line emphasizes the company's commitment to the core clinical process and the practice of evidence-based medicine." Cyber+LE is a trademark of Health Language, Inc. SNOMED and SNOMED CT are registered trademarks of the College of American Pathologists (CAP). Cerner Corporation is the leading supplier of clinical and management information and knowledge systems to more than 1,500 health care organizations worldwide. Cerner is working to transform the health care delivery system by increasing the quality of care, improving efficiencies, eliminating medical error and connecting the individual to the system with innovative information solutions.
